Product Description

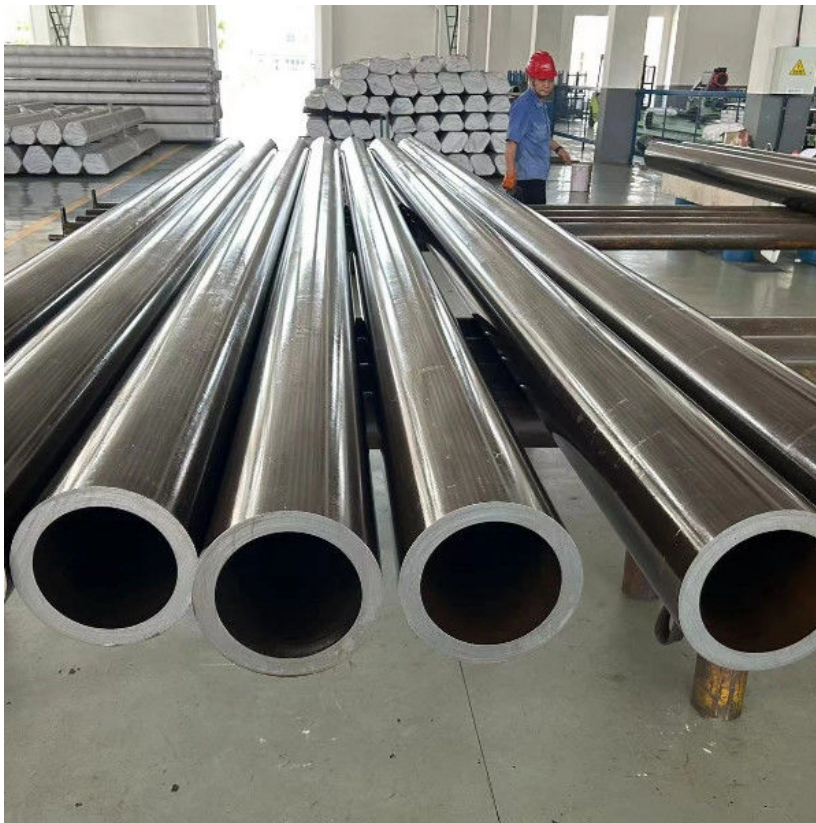

Honed Cylinder Pipe Seamless Steel Tubing Mechanical Tubing For Hydraulic Cylinder

There are two main manufacturing processes for seamless pipes: hot rolling method and cold drawing method. Hot rolling method is to heat the billet to a certain temperature, and then roll through the mill to form the tube. The cold drawing rule is to heat the billet to a certain temperature, and draw it with the cold drawing machine to form a seamless tube. These two processes each have advantages and disadvantages, according to different needs to choose the appropriate process.
